

Software Engineering

Question Bank-IA-1

1. Define Software Engineering? Illustrate about generic process framework activities for software engineering.
2. With a neat diagram explain the waterfall model of the software development process.
3. Describe about software engineering layers with a neat diagram.
4. Explain evolutionary process model with a neat diagram.
5. Differentiate between waterfall and incremental model.
6. List software application domains and Describe any two with an examples
7. Define Requirement Engineering. Explain all tasks involved in requirements engineering in detail.
8. Analyze the steps required to establish the groundwork for an understanding of software requirements.
9. Describe Eliciting or gathering requirement
10. Briefly explain about the generic elements of analysis model with neat diagram
11. With diagrammatical representation, Analyze context-level DFD, level 1 DFD, level 2 DFD for Safe Home Security Function
12. Describe the patterns for the requirement model
13. Explain the Five different types of design classes.
14. Analyze the design classes for Google Pay Application.
15. Discuss Information Hiding and Functional independence with respect to design process
16. Explain the various software quality guidelines and attributes that are involved in the design process.
17. Analyze the Interface Design Elements and the Deployment-Level Design Elements in the design Model with suitable examples.
18. Discuss Abstraction and Modularity with respect to design process
19. List and explain the various natures of web applications.
20. Briefly explain Spiral model with a neat diagram.
21. Explain Prototyping in Software Engineering. What are the benefits of prototyping?
22. Explain the Software Engineering layers with a neat diagram.
23. Explain Waterfall model and V model. What are main differences between the two models?
24. Discuss the David Hooker's seven principles of software engineering Practice
25. Explain Negotiating requirements and validating requirements. What is its importance?
26. Develop a detailed use case and UML use case diagram for an e-commerce customer completing a purchase.
27. Explain the various steps in establishing groundwork for requirements engineering.
28. Briefly explain class Based Modelling with an example.
29. Analyze the differences between activity diagram and class diagram with examples for each.
30. What is QFD? Explain three types of QFD with examples.
